

EVENT RAKSHAK

Entity Relationship Diagram (ERD)

Document Type: Database Schema Reference

Entities: USERS, ROLES, EVENTS, RISKS, POLICIES, POLICY_SUBSCRIPTIONS, CLAIMS, NOTIFICATIONS

Event Rakshak — Entity Relationship Diagram

The Entity Relationship Diagram below represents the complete relational data model of the Event Rakshak platform, exported directly from the H2 database instance. It shows all nine entity tables, their primary and foreign key relationships, field data types, and cardinality annotations. This diagram is the authoritative visual reference for the database schema described in SRS Section 5.

Entities shown: USERS (with IS_ACTIVE, PASSWORD hash), ROLES (ROLE_ID, ROLE_NAME), USER_ROLE (bridge table), EVENTS (27 fields including risk flags), POLICIES (coverage flags and base rate), RISKS (risk scores and factors), POLICY_SUBSCRIPTIONS (weather parameters, approval metadata), CLAIMS (evidence path, resolution timestamps), NOTIFICATIONS (IS_READ, TYPE).
