1. Database Administrator Account

The following statement defines the H2 database administrator account. The password is stored as a salted SHA-256 hash used exclusively for H2 console access during development.

```
CREATE USER IF NOT EXISTS "SA" SALT 'd23ddc0b560d154c' HASH 'fbe30b35ad8efa730d33ce3f166a5bc795210719871c7'
```

2. Table Definitions

All 9 CREATE CACHED TABLE statements defining the EventGuard schema. Each table is labeled with its approximate row count at time of export.

3. Primary Key Constraints

ALTER TABLE statements applying PRIMARY KEY constraints. All primary keys use auto-generated BIGINT identity columns.

```
ALTER TABLE "PUBLIC"."EVENTS" ADD CONSTRAINT "PUBLIC"."CONSTRAINT_7A" PRIMARY KEY("EVENT_ID");
ALTER TABLE "PUBLIC"."NOTIFICATIONS" ADD CONSTRAINT "PUBLIC"."CONSTRAINT_5" PRIMARY KEY("ID");
ALTER TABLE "PUBLIC"."POLICIES" ADD CONSTRAINT "PUBLIC"."CONSTRAINT_4" PRIMARY KEY("POLICY_ID");
ALTER TABLE "PUBLIC"."POLICY_SUBSCRIPTIONS" ADD CONSTRAINT "PUBLIC"."CONSTRAINT_7D" PRIMARY KEY("SUBSCRIPTION_ID");
ALTER TABLE "PUBLIC"."RISKS" ADD CONSTRAINT "PUBLIC"."CONSTRAINT_4A" PRIMARY KEY("RISK_ID");
ALTER TABLE "PUBLIC"."ROLES" ADD CONSTRAINT "PUBLIC"."CONSTRAINT_4A8" PRIMARY KEY("ROLE_ID");
ALTER TABLE "PUBLIC"."USER_ROLE" ADD CONSTRAINT "PUBLIC"."CONSTRAINT_B" PRIMARY KEY("USER_ID", "ROLE_ID");
ALTER TABLE "PUBLIC"."USERS" ADD CONSTRAINT "PUBLIC"."CONSTRAINT_4D" PRIMARY KEY("USER_ID");
ALTER TABLE "PUBLIC"."CLAIMS" ADD CONSTRAINT "PUBLIC"."CONSTRAINT_7" PRIMARY KEY("CLAIM_ID");
```

4. Unique Constraints

UNIQUE constraints enforcing data uniqueness: ROLE_NAME, user EMAIL, POLICY_NAME, and RISK_ID must each be globally unique.

```
ALTER TABLE "PUBLIC"."ROLES" ADD CONSTRAINT "PUBLIC"."UK716HGXP60YM1LIFRDGP67XT5K" UNIQUE NULLS DISTINCT (
ALTER TABLE "PUBLIC"."USERS" ADD CONSTRAINT "PUBLIC"."UK6D0TK0TT2KJSP8VW4D0M25FB7" UNIQUE NULLS DISTINCT (
ALTER TABLE "PUBLIC"."POLICIES" ADD CONSTRAINT "PUBLIC"."UKS0FUW9V0K3CGD1LOB7XACS5HX" UNIQUE NULLS DISTINC
ALTER TABLE "PUBLIC"."POLICY_SUBSCRIPTIONS" ADD CONSTRAINT "PUBLIC"."UK13Y04CAJEDSI9JK1QNKVVI9F9" UNIQUE N
```

5. Foreign Key Constraints

FOREIGN KEY constraints enforcing referential integrity across all related tables. NOCHECK means H2 does not re-validate existing rows at constraint creation; enforcement occurs at insert/update time via Hibernate ORM. Grouped by source table.

Table: CLAIMS

```
ALTER TABLE "PUBLIC"."CLAIMS" ADD CONSTRAINT "PUBLIC"."FKRNH21Y0GQJPK420B4AGCF9MYH" FOREIGN KEY("RESOLVED_ID") REFERENCES "PUBLIC"."CLAIMS"("ID")
